

Week 7 — AI Feature Demo

SentiqAI — AI Sentiment Analysis for Guest Reviews

Intern	Khyati Uttam
Intern ID	TBI-26100004
Program	TBI-GEU Summer Internship Program 2026
Partner organisation	Trishul Eco-Homestays, Chopta, Uttarakhand
Feature	AI Sentiment Analysis (“AI Insights” page)
AI provider	Google Gemini (gemini-1.5-flash)
Endpoint	POST /api/ai/sentiment

STEP 1 — USER INPUT SCREEN

The guest review form on the **/ai-insights** page. Guest name and room are optional; the review text is required. Test case: a negative review is entered for “test user 2”, room 208.

The screenshot shows the SentiqAI web application interface. At the top, there is a navigation bar with the SentiqAI logo on the left and links for Dashboard, Reviews, AI Insights (which is underlined), About, a user profile icon for Khyati, and a Logout button. The main content area has a dark background. In the center, there is a section titled "AI Sentiment Analysis" with a sub-instruction: "Paste any guest review below and let SentiqAI classify its sentiment instantly. Save the result straight to your Reviews list." Below this, there is a form with three input fields: "Guest name (optional)" containing "test user 2", "Room (optional)" containing "208", and "Guest review" containing "The food was tasteless and the room had termites in it". A large blue button labeled "Analyze Sentiment" is positioned at the bottom of the form.

Fig. 1 — Guest review form, ready to submit

STEP 2 — LOADING STATE (MID-REQUEST)

After clicking “Analyze Sentiment,” the button enters a disabled/loading state (“Analyzing...”) and a dot loader with the label “Running AI analysis...” is shown while the backend calls the Gemini API.

Fig. 2 — Loading state while the AI request is in flight

STEP 3 — FINAL AI OUTPUT DISPLAYED

The result renders once the backend responds: sentiment label, confidence score, and a one-to-two sentence summary written for hotel staff. A success toast (“Analysis complete.”) confirms the request finished, and a “Save to Reviews” action is available to persist the result.

The screenshot displays the SentiqAI web application interface. At the top, a navigation bar includes links for Dashboard, Reviews, AI Insights (which is the active page), About, a user profile icon for Khyati, and a Logout button. A green toast notification in the top right corner reads "Analysis complete." with a close button. The main heading is "AI Sentiment Analysis" with a sub-instruction: "Paste any guest review below and let SentiqAI classify its sentiment instantly. Save the result straight to your Reviews list." The input section contains two optional fields: "Guest name (optional)" with the value "test user 2" and "Room (optional)" with the value "208". Below these is a "Guest review" field containing the text "The food was tasteless and the room had termites in it". A large blue button labeled "Analyze Sentiment" is positioned below the review field. The output section shows the result: a red pill-shaped badge with a sad face icon and the word "Negative", followed by "Confidence: 98%". Below this, a summary sentence reads: "The guest reported tasteless food and a serious pest control issue with termites in room 208." At the bottom of the output section is a button labeled "Save to Reviews" with a document icon.

Fig. 3 — AI-generated result: Negative, 98% confidence

STEP 4 — NETWORK TAB — 200 OK

Browser DevTools Network tab for a separate test case ("test user 3," a positive review), confirming the request/response details for the AI endpoint.

Fig. 4 — Request headers: URL `http://localhost:5000/api/ai/sentiment`, Status 200 OK

Appendix — Additional Test Cases

Two further reviews were run through the feature to confirm it classifies different sentiments correctly and consistently, shown below with their Network requests.

AI Sentiment Analysis

Paste any guest review below and let SentiqAI classify its sentiment instantly.
Save the result straight to your Reviews list.

Guest name (optional): Test user 1 Room (optional): 204

Guest review: The staff were amazing and the room was spotless

Analyze Sentiment

Positive Confidence: 100%

The guest was highly satisfied with the amazing staff service and the spotless cleanliness of the room.

Save to Reviews
